**KENTUCKY DIVISION OF WATER
WELLHEAD PROTECTION PLAN
5-YEAR UPDATE FORM**

Update Requirements:

This form should be used for the 5-year update submittal requirements of the Kentucky Wellhead Protection Program (WHPP) in compliance with 401 KAR 4:220 and SDWA Section 1428. Once the form is complete, please sign and send to:

Kentucky Division of Water
Watershed Management Branch
Attention: Chip Zimmer
300 Sower Boulevard, 3rd Floor
Frankfort, Kentucky 40601 or edward.zimmer@ky.gov

For assistance, contact Chip Zimmer at (502) 782-7141 or edward.zimmer@ky.gov

System Information:

PWS Name: Hardin County District No. 2 (HCWD#2) – Plant B/City Springs

PWS ID Number: KY0470175 AI Number: 1662

Contact Person/Title: John Cruse, Chief Operator

Mailing Address: PO Box 970 1951 W. Park Road, Elizabethtown, KY 42702

Telephone: 270-862-3213 Email: jcruse@hcwd2.org

System Type*: COMMUNITY

County: HARDIN ADD: LTADD

WWD Permit #: 4 permits; See attached Table 2 Permitted Amount (mgd): Total 5.2 from (4) different sources. See attached Table 2

Population Served: 76326

Overall Susceptibility Rating*: **High** *High, Medium or Low

WHPP Changes Summary: Since the last update approved in 2010, Hardin County Water District No. 2 has taken over ownership and operation of the City Springs Treatment Plant from The City of Elizabethtown. The CSI has been updated and some changes in sources have occurred with over 250 potential sites. The delineated wellhead protection area for the City Springs Water Treatment Plant encompasses most of the city limits of Elizabethtown and most of the land use is developed and continues to be quickly developed. The area is a typical mature karst terrane with sinkholes, springs, karst windows, and losing and sinking streams most of which receive runoff from interstate highways, railroads, and urban and rural areas. Because of the vulnerability of karst aquifers to contamination, the recharge areas, and groundwater flow characteristics for springs and wells used for public water supply, the entire wellhead protection area has the highest rated sensitivity. In 2022, total annual average withdrawals were 2.1 MGD, so an overall decrease in approximately 1.0 MGD per day has occurred over the last 20 years. Over the last 5 years, water withdrawals from Elizabethtown and Dyers Springs have increased, while withdrawals from the wellfield have decreased (Permit #0121 Field of 4 wells) or ceased (Permit 1029 Field of Well#6). Since the original assessments were completed, changes including Well #5 which is no longer used for potable water, Well #6 is inactive and needs to be plugged, and Well #7 has been plugged. Out of the seven (7) observation wells, two (2) have been plugged, two (2) are active, and four (4) are inactive and need to be plugged. Some of the active wells were also rehabilitated by a certificated driller. All four (4) water withdrawal permits were last revised in 2014 and Permit #0690 for Freeman Lake was rescinded in 2018.

Update Form Instructions:

Please complete each section that applies to any system or WHPP updates and submit the supporting documentation. Please indicate if a section is not applicable to this update. **Sections 4 and 6 through 11 are required for every 5-year update.**

Please sign certification on the last page upon completion.

Section Updates:

Section 1: Treatment Plant

If the treatment plant location has changed then provide a new location map below. This can be a county roadmap or a GIS-produced map. Please use the area below to provide relevant details, or to indicate that no change has occurred.

Location remains at the end of Nicholas Spring Court, Elizabethtown, KY. The City Springs Water Treatment Plant has a design capacity of 3.3 million gallons per day (MGD).

Section 2: Water Withdrawal and Water Quality

If there have been changes in water withdrawal rates or water quality since the last submittal, provide a discussion of the relevant details in the space below (include new Water Withdrawal Permit Number if applicable). Include supporting documentation as an attachment.

In 1985, reported average daily withdrawals were 1.15 million gallons from two wells #3 and #4 and 0.75 million gallons from the two springs. Phase I completed in 2001 reports withdrawals of 3.1 MGD from combined sources. In 2022, total annual average withdrawals were 2.1 MGD, so an overall decrease in approximately 1.0 MGD per day has occurred over the last 20 years and is more comparable to withdrawals of the mid-1980's. Over the last 5 years, water withdrawals from Elizabethtown and Dyers Springs have increased, while withdrawals from the wellfield have decreased (Permit #0121 Field of 4 wells) or ceased (Permit 1029 Well #6). Since the original assessments were completed, changes including Well #5 which is no longer used for potable water by HCDW#2, Well #6 is inactive and needs to be plugged, and Well #7 has been plugged. All four (4) water withdrawal permits were last revised in 2014. Once Well #6 is has been plugged, water withdrawal Permit # 1029 should be rescinded since it is no longer active.

In a mature karst aquifer such as occurs in the Elizabethtown area, both water-supply springs, Elizabethtown and Dyers, serve as natural discharge points for master conduits draining separate ground-water basins. Master conduits concentrate conduit flow from sinkholes and sinking streams. Flow in master conduits is typically turbulent, with highly variable turbidity and temperature, and relatively flashy response to precipitation. Discharge from both springs is flashy with peak discharge usually occurring within one day, or less, of the peak precipitation event.

Dyers Spring (0009-1137) is part of the statewide Ambient Groundwater Monitoring Program which provides baseline groundwater data on aquifer characterization, ambient groundwater quality and nonpoint source pollution. Groundwater, including public water supplies and private-sector wells and springs, are sampled quarterly and analyzed for hundreds of parameters, including metals, nutrients, pesticides and volatile organic compounds. The only parameter that's been above the Maximum Contaminant Level (MCL) of 0.05 Mg/L consistently is Aluminum. Tetrachloroethane or carbon tetrachloride have also been consistently detected, but not at or near MCL. There have also been infrequent detections of herbicides/pesticides over the years. MCL represents the highest level of a contaminant that is allowed in drinking water. The karst-dominated Mississippian Plateau, with closer connections to surface influences, has shown increasing trends for metal analytes, pH, and conductivity especially from in spring stations in the physiographic region (Report on the Condition of Ambient Groundwater in Kentucky 2018). The Mississippian Plateau physiographic region is also having significant downward trends for nitrite and sulfates.

The presence of infiltrated water from Valley Creek in both city water-supply Well #3 and #4 was confirmed by qualitative dye traces. More than likely this also applies to Wells #1 and #2. Operators with HCWD#2 report Well #1 and #2 being heavily influenced by turbidity during rainfall events so those sources are susceptible to the influences of flow and groundwater elevation in Valley Creek. Dyers Spring also reportedly dries up during periods of no rainfall. Valley Creek and its tributaries drain the entire Elizabethtown urban area.

Section 3: Change or Modification to Groundwater Source

If the system has changed or modified the wells or springs being used, provide the following: 1) a description of changes/modifications; 2) copies of the relevant form(s) (Kentucky Water Well Record, Well Maintenance & Plugging Record, Well Inspection Form or Spring Inventory Record); and 3) any other information relating to well construction (i.e., installation logs, driller's logs, lithological or geophysical logs), below.

In 2014, HCWD#2 developed a purchase contract for Well # 1, #2, #3, #4, and #6. Well #5 and all the remaining observation wells were not included in the contract and remain under ownership of the City of Elizabethtown. Currently a total of four (4) wells and two (2) springs supplies public drinking water to the City of Elizabethtown and surrounding county residents. In 2000, Well #7 (00055281) and observation wells OW-S-8-87 (00055279) and OW-7 (00055281) were plugged. Well #5 (00055275) is owned and operated by the City of Elizabethtown and is no longer used for potable water by HCDW#2, Well #6 is inactive and needs to be plugged, and out of the six (6) remaining observation wells, two (2) are active (OW-1-81/00055283 & OW-4/00055282), and four (4) are inactive and need to be plugged (OW-2/00055285, OW-3/00055284, OW-5/00055280 & OW-6/00055278). The observation wells were installed by USGS in 1987 as part of a dye tracing study to determine groundwater flow conducted with the City of Elizabethtown (USGS Water-Resources Investigations Report 87-4174). HCWD#2 contracted with National Water Services to have Well #4 cleaned in 2016 and Well #2 & #3 cleaned and new pumps installed in 2017. Records are available through KGS and should be on file at Division of Water. Inspection forms to reflect changes in ownership, location, and status will be completed and submitted to the Division of Water.

Section 4 (REQUIRED): Planning Team

Effective water supply protection requires community involvement and public awareness. Identify the planning team consisting of a leader and at least two team members, with their respective titles, below.

Leader:

John Cruse, Chief Operator Plant A/ White Mills

Team Members:

Shaun Youravich, General Manager

Wayne Milliner, Chief Operator Plant B/ City Springs

Section 5: WHPA Delineation

If the system is revising a Wellhead Protection Area (WHPA) delineation, or if a new groundwater source has been added since the last submittal, provide a site-specific description of the local geology and aquifer. Include references for published literature. Provide a summary of any aquifer tests (i.e. pumping tests, slug tests, tracer tests), including data gathering and evaluation methods. Show calculations and supporting data for each WHPA delineated or revised. Include the detailed hydrogeologic report as an attachment.

No changes in delineation.

Section 6 (REQUIRED): WHPA Map

Provide a WHPA map that shows each groundwater source labeled with the appropriate AKGWA #, all protection zones identified and the Contaminant Source Inventory (CSI) point locations. If no changes have occurred since the last submittal, then a copy of the most recent WHPA/CSI map can be resubmitted. To view the most recent delineations for your system, please visit the [Source Water Protection Viewer](#). Please contact program staff for assistance.

See attached WHPA Map. The wellhead protection areas are the hydrological boundary and area named 3A and 3B to cover their respective wellfields as provided in the table below.

<u>Zone Name</u>	<u>Well ID</u>
WHPA 3B	1
WHPA 3B	2
WHPA 3B	3
WHPA 3A	4
WHPA 3A	5

Section 7 (REQUIRED): Contaminant Source Inventory

Provide an updated CSI in table format. This can be created using the spreadsheet template provided, and copied into the space below. If no changes occurred since the last update, the table can be pulled from previous WHPP documents. Each contaminant source listed should have a Contaminant Source ID # that corresponds to the WHPA map in Section 6. The CSI table must show the susceptibility determination ranking for each contaminant source. Include a brief narrative discussion of the overall system susceptibility. For more information on potential sources of contamination, please visit the DOW's [Web Tools for SWP Planning website](#). Please contact program staff for assistance.

See attached CSI. HCWD#2 Plant B/City Springs Water Treatment Plant currently draws its source water from a combination of wells (infiltrated surface water) and springs with an estimated 60% from the springs. The wellhead protection area lies within the Interior Low Plateaus physiographic province and consists of a sinkhole plain named the Pennyroyal. The Pennyroyal is a gently rolling broad upland underlain by soluble limestone, and is characterized by karst features such as sinkholes, sinking streams, springs, and subsurface drainage. The area is a typical of this mature karst terrane with sinkholes, springs, karst windows, and losing and sinking stream most of which receive runoff from interstate highways, railroads, and urban and rural areas. Because of the vulnerability of karst aquifers to contamination, the recharge areas, and groundwater flow characteristics for springs and wells used for public water supply, the entire wellhead protection area has the highest rated sensitivity.

The delineated wellhead protection area includes the City of Elizabethtown and most of the land use is developed. It also lies in the middle of several major roadways and intersections and railroad transportation routes. The contaminant source inventory indicates more than 250 potential contaminant sources including major transportation routes, bridges and culverts, gas stations, lifts

stations, in addition to industrial, commercial, and municipal sources. Additionally, an estimated 1,500 septic systems lie within the protection area. Heavy development is currently occurring around the water sources and the plant so security and access at the springs and wellfield should be prioritized, and any abandoned or inactive wells should be plugged.

Section 8 (REQUIRED): Management Strategies

Provide a discussion of the previous and newly proposed management strategies to prevent source water contamination. This discussion must include the previous management strategies that were implemented as well as the goals that were met. Next, include any NEWLY proposed management strategies, associated goals, implementation plans and the party responsible for implementation. For information about wellhead protection strategies please visit the DOW's [Source Water Protection Strategies website](#).

Previous Management Strategy Update:

The wellhead protection area has been assessed and some management strategies had been enacted in the 2010 plan update including installation of water supply and emergency numbers signs around the wellhead protection area, distributing and posting maps of the wellhead protection area, and extending sewer service to homes along White Oak and Brett Drive.

Newly Proposed Management Strategies:

The delineated wellhead protection area for the Plant B/City Springs Water Treatment Plant encompasses most of the city limits of Elizabethtown and most of the land use is developed and continues to be quickly developed. This circumstance makes it difficult to implement ordinances to prohibit certain types of land uses that could pose threats. Education and outreach, signage and maps should be distributed widely, development of groundwater protection plans (GPPs) under 401 KAR 5:037 within the protection area and extending wastewater service to unserved or underserved residents is also key. HCWD#2 has proposed wastewater extensions for unserved households, businesses, and the new BlueOval SK Battery Park in the Glendale area. This large-scale industrial site that will produce batteries for the next generation of Ford and Lincoln electric vehicles is being developed just south of the WHPA southeast of the town of Glendale. The project will include conveyance to the City of Elizabethtown's Valley Creek wastewater treatment plant. Existing wastewater service is provided by the City of Elizabethtown with the same conveyance in the Gaithers portion of the protection area and northwest in Cecilia at the TJ Patterson Industrial Park which is also expanding. While wastewater service extension can prevent contamination of groundwater it will also impact current and future development within and around the protection area. Heavy residential, municipal, commercial/industrial and roadway development is currently occurring in and around the water sources and the water treatment plant so security and access at the springs and wellfield should be prioritized, and any abandoned or inactive water and observation wells should be plugged. Any illegal dumps or spills should be reported to the Kentucky Division of Water Louisville Regional Office. Coordination with Hardin County Planning and Development Commission and the Hardin County Fiscal Court MS4 coordinator regarding the Stormwater Quality Management Plan should be scheduled regularly regarding ordinances associated with the Source Water Protection Overlay Zone. Utilizing consumer confidence reports (CCRs) for outreach and education efforts of the wellhead protection areas,

contaminant inventories, and susceptibility determinations, and outline measures that are being taken to protect their groundwater supply.

Section 9 (REQUIRED): Contingency and WHP Planning

Provide a description of Contingency and WHP Planning. Complete the Emergency Response Phone List, Procedures for Public Notification, identification of Potential Future Problems and the procedures to establish Alternative Water Supplies. This section must also address how often the WHPP will be reviewed and updated.

Emergency Response Phone List

Fill in all Blanks and Phone Numbers with appropriate information.

Local Emergency Response	Phone Number
Plant Operator	270-982-8399
Elizabethtown Fire Department Station 1	270-765-2121
Elizabethtown Police Department	270-765-4125
Hardin County Sheriff	270-765-5133
Local Emergency Dispatch Click here to enter text.	911

State and Federal Assistance	Phone Number
Kentucky DOW (Frankfort)	(502) 564-3410
Kentucky DOW Associated Field Office (FO) Louisville Regional Office	(502) 429-7122
Kentucky Environmental Response Team 24 hour response line	(502) 564-2380 (800) 928-2380
Kentucky State Fire Marshall	(502) 573-0382

Any Other Pertinent Contacts	Any Other Pertinent Numbers
Click here to enter text.	PHONE NUMBER
Click here to enter text.	PHONE NUMBER
Click here to enter text.	PHONE NUMBER

Procedures for Public Notification:

In the event of a water system emergency that would threaten the health or life of the public, use the following procedure. Prepare and broadcast an advisory, including directions for the public. Describe the public notification process and provide contacts for those media outlets. If the system uses methods other than traditional media please list them.

Traditional media provided below.

Newspaper, Television, and Radio Stations	Phone Numbers
Radio WQXE	270-737-8000
Television Wave 3	502-585-2201

Potential Future Problems:

Describe the *most likely* scenarios that could threaten the water supply.

In accordance with the CSI and location of the sources of water supply, spills or contamination from transportation corridors or commercial or industrial development. Additionally, because the water supply is drought vulnerable HCWD#2 has interconnections for backup if needed.

Alternative Water Supply (Short and Long Term):

Describe the short term and long-term water supply alternatives that address each of the potential future problems identified above. List all current interconnections with other water systems. Discuss the capacity of each potential alternative water supply to sustain normal operations.

In the event contamination does occur, depending on the nature and extent of the contaminant, long and short-term contingency plans should be in place. Short term contingency planning would include a boil water advisory to all affected customers. Plant B/City Springs Water Treatment Plant has large diameter interconnections with White Mills Water Treatment Plant and Louisville Water Company that can provide water supply alternatives when needed.

Schedule for Update and Review:

The Wellhead Protection Plan will be reviewed regularly and updated every five years as required by regulation.

Section 10 (REQUIRED): Copies of Public Notices and Education Materials

Provide copies of wellhead protection public notices and education materials distributed.

A copy of this wellhead protection plan will be posted on the HCWD#2 webpage and the link to plan will be printed on customer bills for public review.

Section 11 (REQUIRED): Public Meeting Documentation***

Provide the record of WHPP public meeting attendance, minutes and comments.

A copy of this wellhead protection plan will be posted on the HCWD#2 webpage and the link to plan will be printed on customer bills for public review. A copy will be provided in the attachments for documentation.

***Non-Community Water Systems are not required to have public meetings for 5-year updates, but must post a public notice in a conspicuous place. A public notice template is provided as a separate document. However, public input and associated documentation are encouraged. Please contact program staff if you have any questions.

Certification Signature (TO BE COMPLETED BY PLANNING REPRESENTATIVE):

"I certify that this document and all attachments were prepared under my direction or supervision. The information submitted is, to the best of my knowledge and belief, true, accurate, and complete."

Signature:
